

MODULE 1

Getting Started with iFeed V2

Estimated time: 15 minutes

LEARNING OBJECTIVE

Understand what iFeed V2 is, why it exists, and gain access to the platform using Google authentication.

LESSON 1

3 min

What is iFeed V2?

OVERVIEW

Learn what iFeed V2 is, how it helps formulate cost-effective carabao feeds using the Simplex Algorithm, and the different types of users who can benefit from the system (farmers and nutritionists).

Description

iFeed version 2 is a web-based feed formulation cost optimization system designed to assist carabao farmers in creating optimal feed formulations through ingredient and nutrient management. It utilizes the Simplex Algorithm to generate formulations based on nutritional requirements derived from user specifications. User specifications are made easier through a “Google Formlike” survey to identify the proper feed nutrients the carabao needs. The system is purely focused on carabao feed formulations and formulation maintenance.

LESSON 2

5 min

Creating and Managing Your Account

OVERVIEW

Learn how to create an account, sign in using Google authentication, and securely sign out.

Step 1 — Sign Up

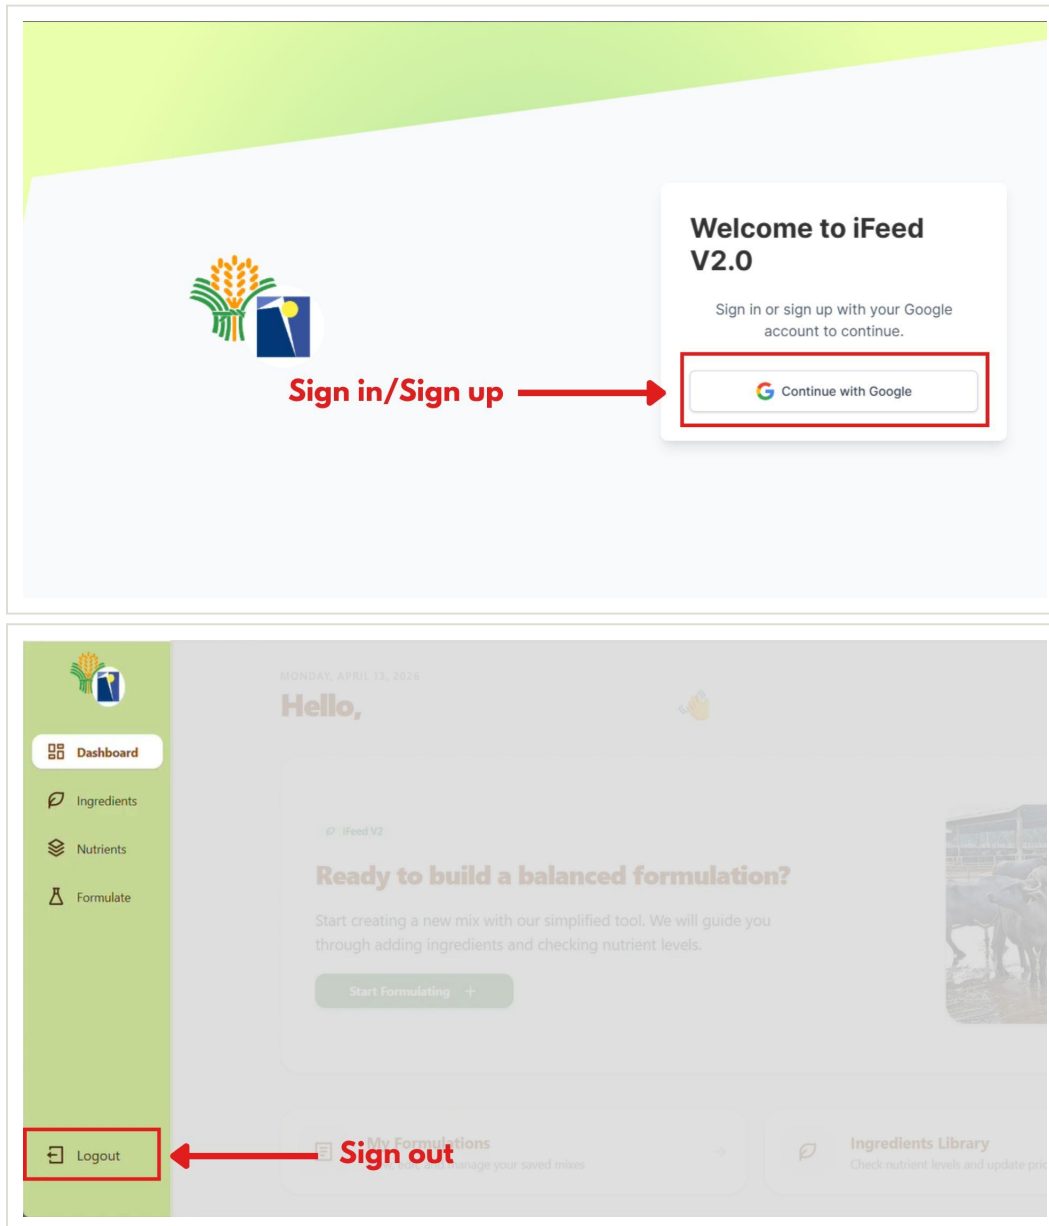

- Allow new users to create an account through Google, ensuring a secure, passwordless account.

Step 2 — Sign In

- Enable existing users to log in through Google Sign-In for a secure and quick login experience.

Step 3 — Sign Out

- Allow users to securely log out, terminating active sessions to protect their information.

Signing in with Google, and signing out from the dashboard sidebar

Test Cases

Test Case	Expected Result
Sign up using a valid Google account	User account is created and redirected to dashboard
Sign in using an existing Google account	User successfully logs in
Sign out from dashboard	User session ends and is redirected to login page

LESSON 3

7 min

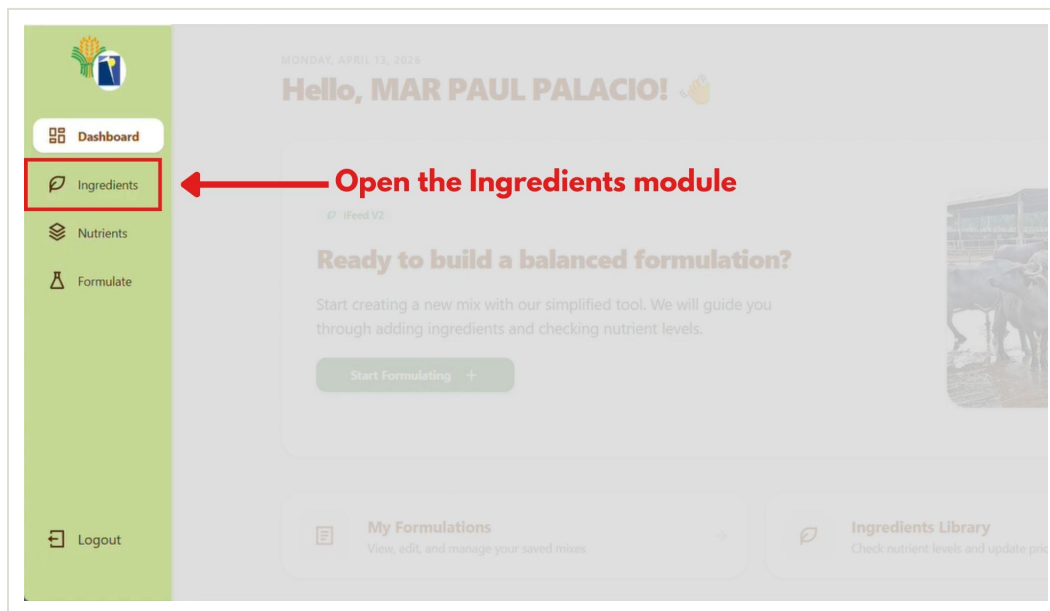

Reading the Dashboard

OVERVIEW

Understand the main sections of the dashboard including Start Formulating, My Formulations, and the Ingredients Library.

Step 1 — Navigate through Ingredients Library

- Shows the ingredients provided by the application.

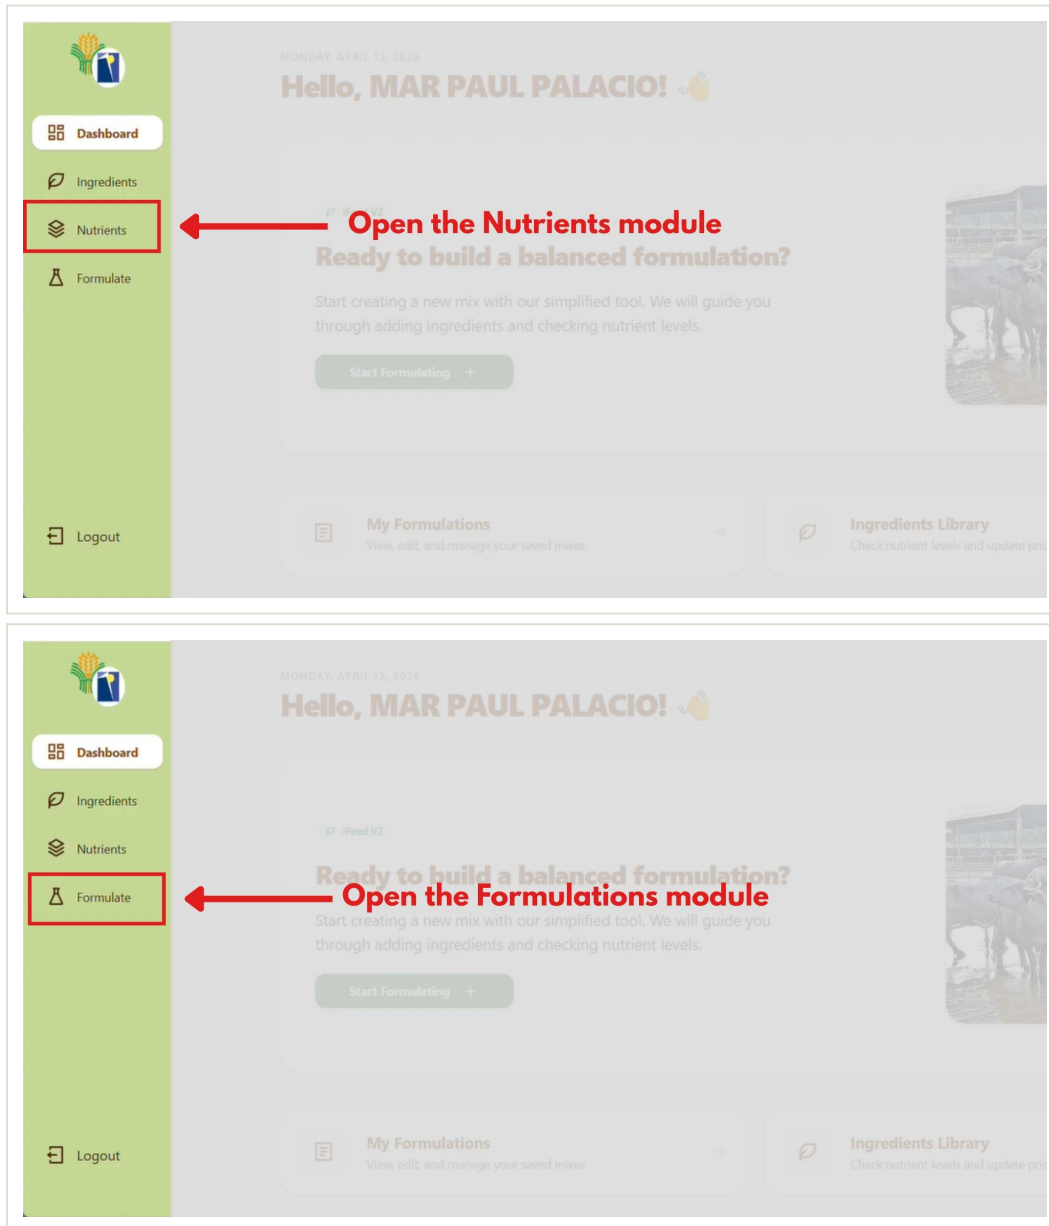

Opening the Ingredients module from the sidebar

Step 2 — Navigate through Nutrients Library

- Shows the nutritional information provided by the application.

Step 3 — Navigate through Feed Formulation

- Displays the list of active formulations either created by the user or shared with the user.

Opening the Nutrients module and the Formulations module

Test Cases

Test Case	Expected Result
Open Start Formulating	Formulation options are displayed
Open My Formulations	User's formulations are displayed
Open Ingredients Library	Ingredient list is displayed
Open a formulation from My Formulations	Formulation details load successfully
